October 22, 2010 – SERDI is among the expert companies to join the TASC, Inc. team that has been awarded a 10-year contract worth up to \$827.8 million for National Airspace System (NAS) support services that will enable the Federal Aviation Administration (FAA) to accomplish a smooth and successful transition to Next Generation (NextGen), a satellite-based network that will replace the U.S. radar-based air traffic control system. The scope of the SE-2020 support services contract covers advanced systems engineering, investment and business case analysis, planning and forecasting, as well as business, financial and information management support services related to the development and the transformation of the national air transportation system.

“NextGen will transform the way Americans travel and airlines operate,” says Sabrina Poole, President and CEO of SERDI. “We are excited and honored to be part of the team that will help implement this revolutionary air traffic system.”

NextGen is slated for completion in 2025 and aims to enhance the overall passenger experience, improve airline efficiency and secure and defend the U.S. air transportation system from emerging threats. Through a modernized, near real-time air traffic management capability, NextGen will lead to fewer scheduling and weather delays and other air traffic snarls, reduced fuel consumption, lower carbon emissions and greater safety and security.

About TASC

Founded in 1966, TASC, Inc. is a leading, non-conflicted provider of advanced systems engineering, integration and decision-support services to the Intelligence Community, Department of Defense and civilian agencies of the federal government. A unit of Northrop Grumman Corporation from 2001 to 2009, TASC became an independent company in December 2009. With 5,000 employees in 38 locations, TASC generates more than \$1.6 billion in annual revenue. For more information, visit their website at www.tasc.com.
